Preface *XXV*
Acknowledgments *XXIX*

Content of Volume 1

Part I **Introduction** *1*

1 **Elementary Principles of Diffusion** *3*
1.1 Fundamental Definitions *4*
1.1.1 Transfer of Matter by Diffusion *4*
1.1.2 Random Walk *6*
1.1.3 Transport Diffusion and Self-Diffusion *7*
1.1.4 Frames of Reference *9*
1.1.5 Diffusion in Anisotropic Media *10*
1.2 Driving Force for Diffusion *12*
1.2.1 Gradient of Chemical Potential *12*
1.2.2 Experimental Evidence *15*
1.2.3 Relationship between Transport and Self-diffusivities *16*
1.3 Diffusional Resistances in Nanoporous Media *17*
1.3.1 Internal Diffusional Resistances *17*
1.3.2 Surface Resistance *19*
1.3.3 External Resistance to Mass Transfer *19*
1.4 Experimental Methods *21*
References *24*

Part II **Theory** *25*

2 **Diffusion as a Random Walk** *27*
2.1 Random Walk Model *27*
2.1.1 Mean Square Displacement *27*
2.1.2 The Propagator *29*
2.1.3 Correspondence with Fick's Equations *32*
2.2 Correlation Effects *33*
2.2.1 Vacancy Correlations *33*

COPYRIGHTED MATERIAL

2.2.2 Correlated Anisotropy *35*
2.3 Boundary Conditions *35*
2.3.1 Absorbing and Reflecting Boundaries *35*
2.3.2 Partially Reflecting Boundary *38*
2.3.3 Matching Conditions *39*
2.3.4 Combined Impact of Diffusion and Permeation *40*
2.4 Macroscopic and Microscopic Diffusivities *42*
2.5 Correlating Self-Diffusion and Diffusion with a Simple Jump Model *44*
2.6 Anomalous Diffusion *47*
2.6.1 Probability Distribution Functions of Residence Time and Jump Length *47*
2.6.2 Fractal Geometry *49*
2.6.3 Diffusion in a Fractal System *53*
2.6.4 Renormalization *54*
2.6.5 Deviations from Normal Diffusion in Nanoporous Materials: A Retrospective *55*
References *57*

3 Diffusion and Non-equilibrium Thermodynamics *59*
3.1 Generalized Forces and Fluxes *59*
3.1.1 Mechanical Example *59*
3.1.2 Thermodynamic Forces and Fluxes *60*
3.1.3 Rate of Generation of Entropy *61*
3.1.4 Isothermal Approximation *63*
3.1.5 Diffusion in a Binary Adsorbed Phase *64*
3.2 Self-Diffusion and Diffusive Transport *65*
3.3 Generalized Maxwell–Stefan Equations *67*
3.3.1 General Formulation *67*
3.3.2 Diffusion in an Adsorbed Phase *68*
3.3.3 Relation between Self- and Transport Diffusivities *71*
3.4 Application of the Maxwell–Stefan Model *72*
3.4.1 Parameter Estimation *72*
3.4.2 Membrane Permeation *73*
3.4.3 Diffusion in Macro- and Mesopores *74*
3.5 Loading Dependence of Self- and Transport Diffusivities *75*
3.5.1 Self-Diffusivities *75*
3.5.2 Transport Diffusivities *77*
3.5.3 Molecular Simulation *78*
3.5.4 Effect of Structural Defects *78*
3.6 Diffusion at High Loadings and in Liquid-Filled Pores *80*
References *81*

4 Diffusion Mechanisms *85*
4.1 Diffusion Regimes *85*
4.1.1 Size-Selective Molecular Sieving *85*

4.2 Diffusion in Macro- and Mesopores *87*
4.2.1 Diffusion in a Straight Cylindrical Pore *87*
4.2.1.1 Knudsen Mechanism *88*
4.2.1.2 Viscous Flow *90*
4.2.1.3 Molecular Diffusion *91*
4.2.1.4 Transition Region *91*
4.2.1.5 Self-Diffusion/Tracer Diffusion *92*
4.2.1.6 Relative Importance of Different Mechanisms *92*
4.2.1.7 Surface Diffusion *92*
4.2.1.8 Combination of Diffusional Resistances *93*
4.2.2 Diffusion in a Pore Network *94*
4.2.2.1 Dusty Gas Model *94*
4.2.2.2 Effective Medium Approximation *95*
4.2.2.3 Tortuosity Factor *95*
4.2.2.4 Parallel Pore Model *96*
4.2.2.5 Random Pore Model *97*
4.2.2.6 Capillary Condensation *97*
4.3 Activated Diffusion *99*
4.3.1 Diffusion in Solids *99*
4.3.2 Surface Diffusion Mechanisms *100*
4.3.2.1 Vacancy Diffusion *100*
4.3.2.2 Reed–Ehrlich Model *101*
4.3.3 Diffusion by Cage-to-Cage Jumps *104*
4.4 Diffusion in More Open Micropore Systems *106*
4.4.1 Mobile Phase Model *106*
4.4.2 Diffusion in a Sinusoidal Field *107*
4.4.3 Free-Volume Approach for Estimating the Loading Dependence *108*
References *108*

5 Single-File Diffusion *111*
5.1 Infinitely Extended Single-File Systems *112*
5.1.1 Random Walk Considerations *112*
5.1.2 Molecular Dynamics *116*
5.2 Finite Single-File Systems *119*
5.2.1 Mean Square Displacement *119*
5.2.2 Tracer Exchange *120*
5.2.3 Catalytic Reactions *123*
5.2.3.1 Dynamic Monte Carlo Simulations and Adapting the Analysis for Normal Diffusion *123*
5.2.3.2 Rigorous Treatment *125*
5.2.3.3 Molecular Traffic Control *130*
5.3 Experimental Evidence *132*
5.3.1 Ideal versus Real Structure of Single-File Host Systems *132*
5.3.2 Experimental Findings Referred to Single-File Diffusion *135*
5.3.2.1 Pulsed Field Gradient NMR *135*

5.3.2.2 Quasi-elastic Neutron Scattering *136*
5.3.2.3 Tracer Exchange and Transient Sorption Experiments *137*
5.3.2.4 Catalysis *138*
References *139*

6 Sorption Kinetics *143*
6.1 Resistances to Mass and Heat Transfer *143*
6.2 Mathematical Modeling of Sorption Kinetics *145*
6.2.1 Isothermal Linear Single-Resistance Systems *145*
6.2.1.1 External Fluid Film or Surface Resistance Control *145*
6.2.1.2 Micropore Diffusion Control *146*
6.2.1.3 Effect of Particle Shape *149*
6.2.1.4 Macropore Diffusion Control *149*
6.2.2 Isothermal, Linear Dual-Resistance Systems *151*
6.2.2.1 Surface Resistance plus Internal Diffusion *151*
6.2.2.2 Transient Concentration Profiles *152*
6.2.2.3 Two Diffusional Resistances (Biporous Solid) *156*
6.2.3 Isothermal Nonlinear Systems *160*
6.2.3.1 Micropore Diffusion Control *160*
6.2.3.2 Macropore Diffusion Control *160*
6.2.3.3 Semi-infinite Medium *161*
6.2.3.4 Adsorption Profiles *162*
6.2.3.5 Desorption Profiles *165*
6.2.3.6 Experimental Uptake Rate Data *167*
6.2.3.7 Adsorption/Desorption Rates and Effective Diffusivities *170*
6.2.3.8 Approximate Analytic Representations *172*
6.2.3.9 Linear Driving Force Approximation *172*
6.2.3.10 Shrinking Core Model *173*
6.2.3.11 Surface Resistance Control – Nonlinear Systems *176*
6.2.4 Non-isothermal Systems *179*
6.2.4.1 Intraparticle Diffusion Control *181*
6.2.4.2 Experimental Non-isothermal Uptake Curves *183*
6.3 Sorption Kinetics for Binary Mixtures *185*
6.3.1.1 Counter-Diffusion *186*
6.3.1.2 Co-diffusion *187*
References *188*

Part III Molecular Modeling *191*

7 Constructing Molecular Models and Sampling Equilibrium Probability Distributions *193*
7.1 Models and Force Fields for Zeolite–Sorbate Systems *194*
7.1.1 Molecular Model and Potential Energy Function *194*
7.1.2 *Ab Initio* Molecular Dynamics of Zeolite-Sorbate Systems *203*

7.1.3 Computer Reconstruction of Meso- and Macroporous Structure *204*
7.2 Monte Carlo Simulation Methods *206*
7.2.1 Metropolis Monte Carlo Algorithm *206*
7.2.2 Canonical Monte Carlo *207*
7.2.3 Grand Canonical Monte Carlo *210*
7.2.4 Gibbs Ensemble and Gage Cell Monte Carlo *215*
7.3 Free Energy Methods for Sorption Equilibria *217*
7.4 Coarse-Graining and Potentials of Mean Force *222*
References *224*

8 Molecular Dynamics Simulations *227*
8.1 Statistical Mechanics of Diffusion *227*
8.1.1 Self-diffusivity *227*
8.1.2 Mass Fluxes in a Microporous Medium *229*
8.1.3 Transport in the Presence of Concentration Gradients in Pure and Mixed Sorbates *232*
8.2 Equilibrium Molecular Dynamics Simulations *235*
8.2.1 Integrating the Equations of Motion: the Velocity Verlet Algorithm *235*
8.2.2 Multiple Time Step Algorithms: rRESPA *238*
8.2.3 Domain Decomposition *241*
8.2.4 Molecular Dynamics of Rigid Linear Molecules *241*
8.2.5 Molecular Dynamics of Rigid Nonlinear Molecules: Quaternions *245*
8.2.6 Constraint Dynamics in Cartesian Coordinates *249*
8.2.7 Extended Ensemble Molecular Dynamics *253*
8.2.8 Example Application of Equilibrium MD to Pure Sorbates *257*
8.2.9 Example Applications of MD to Mixed Sorbates *259*
8.3 Non-equilibrium Molecular Dynamics Simulations *265*
8.3.1 Gradient Relaxation Method *265*
8.3.2 External Field NEMD *267*
8.3.3 Dual Control Volume Grand Canonical Molecular Dynamics *269*
References *272*

9 Infrequent Event Techniques for Simulating Diffusion in Microporous Solids *275*
9.1 Statistical Mechanics of Infrequent Events *276*
9.1.1 Time Scale Separation and General Expression for the Rate Constant *276*
9.1.2 Transition State Theory Approximation and Dynamical Correction Factor *281*
9.1.3 Multidimensional Transition State Theory *283*
9.1.4 Infrequent Event Theory of Multistate Multidimensional Systems *290*
9.1.5 Numerical Methods for Infrequent Event Analysis *291*

9.2 Tracking Temporal Evolution in a Network of States *292*
9.2.1 Master Equation *292*
9.2.2 Kinetic Monte Carlo Simulation *293*
9.2.3 Analytical Solution of the Master Equation *295*
9.3 Example Applications of Infrequent Event Analysis and Kinetic Monte Carlo for the Prediction of Diffusivities in Zeolites *296*
9.3.1 Self-diffusivity at Low Occupancies *296*
9.3.2 Self-diffusivity at High Occupancy *300*
References *301*

Part IV Measurement Methods *303*

10 Measurement of Elementary Diffusion Processes *305*
10.1 NMR Spectroscopy *306*
10.1.1 Basic Principles: Behavior of Isolated Spins *306*
10.1.1.1 Classical Treatment *306*
10.1.1.2 Quantum Mechanical Treatment *308*
10.1.2 Behavior of Nuclear Spins in Compact Material *309*
10.1.2.1 Fundamentals of the NMR Line Shape *311*
10.1.2.2 Effect of Molecular Motion on Line Shape *311*
10.1.2.3 Fundamentals of Pulse Measurements *314*
10.1.3 Resonance Shifts by Different Surroundings *318*
10.1.3.1 Spins in Different Chemical Surroundings *318*
10.1.3.2 Anisotropy of the Chemical Shift *320*
10.1.3.3 Quadrupole NMR *320*
10.1.4 Impact of Nuclear Magnetic Relaxation *323*
10.2 Diffusion Measurements by Neutron Scattering *326*
10.2.1 Principle of the Method *326*
10.2.1.1 Experimental Procedure *326*
10.2.2 Theory of Neutron Scattering *327*
10.2.3 Scattering Patterns and Molecular Motion *330*
10.2.3.1 Fundamental Relations *330*
10.2.3.2 Thermodynamic Factor *331*
10.2.3.3 Evidence on the Elementary Steps of Diffusion *334*
10.2.3.4 Intermediate Scattering Function *334*
10.2.3.5 Range of Measurement *335*
10.3 Diffusion Measurements by Light Scattering *337*
10.3.1 Theory *337*
10.3.2 Experimental Issues for Observing Light Scattering Phenomena: Index Matching *339*
10.3.2.1 Index Matching *339*
10.3.2.2 Optical Mixing Techniques *340*
10.3.2.3 Filter Techniques *341*
References *343*

11 Diffusion Measurement by Monitoring Molecular Displacement *347*
11.1 Pulsed Field Gradient (PFG) NMR: Principle of Measurement *348*
11.1.1 PFG NMR Fundamentals *348*
11.1.2 Basic Experiment *351*
11.2 The Complete Evidence of PFG NMR *352*
11.2.1 Concept of the Mean Propagator *352*
11.2.2 Evidence of the Mean Propagator *353*
11.2.3 Concept of Effective Diffusivity *354*
11.3 Experimental Conditions, Limitations, and Options for PFG NMR Diffusion Measurement *355*
11.3.1 Sample Preparation *355*
11.3.2 Basic Data Analysis and Ranges of Observation *356*
11.3.3 Pitfalls *358*
11.3.3.1 Gradient Pulse Mismatch *358*
11.3.3.2 Mechanical Instabilities *358*
11.3.3.3 Benefit of Extra-large Stray-Field Gradients *359*
11.3.3.4 Impedance by Internal Gradients *359*
11.3.3.5 Impedance by Contaminants *360*
11.3.4 Measurement of Self-diffusion in Multicomponent Systems *361*
11.3.4.1 Fourier-Transform PFG NMR *361*
11.3.4.2 Alternative Approaches *362*
11.3.5 Diffusion Anisotropy *362*
11.3.5.1 "Single-Crystal" Measurements *362*
11.3.5.2 Powder Measurement *363*
11.3.5.3 Evidence on Host Structure *364*
11.4 Different Regimes of PFG NMR Diffusion Measurement *364*
11.4.1 Effect of Finite Crystal Size on the Measurement of Intracrystalline Diffusion *365*
11.4.1.1 Correlating the True and Effective Diffusivities in the Short-Time Limit *365*
11.4.1.2 Correlating the Effective Diffusivities with the Crystal Dimensions in the Long-Time Limit *367*
11.4.2 Long-Range Diffusion *368*
11.4.2.1 Tortuosity Factor and the Mechanism of Diffusion *369*
11.4.3 Covering the Complete Range of Observation Times, the "NMR-Tracer Desorption" Technique *371*
11.4.3.1 Two-Dimensional Monte-Carlo Simulation *371*
11.4.3.2 Two-Region Model *374*
11.4.3.3 NMR Tracer Desorption (= Tracer-Exchange) Technique *376*
11.4.3.4 Observation of Surface Barriers *377*
11.5 Experimental Tests of Consistency *379*
11.5.1 Variation of Crystal Size *379*
11.5.2 Diffusion Measurements with Different Nuclei *379*
11.5.3 Influence of External Magnetic Field *380*

11.5.4 Comparison of Self-diffusion and Tracer Desorption Measurements *380*
11.5.5 Blocking of the Extracrystalline Space *380*
11.5.6 Determination of Crystal Size for Restricted Diffusion Measurements *381*
11.5.7 Long-Range Diffusion *382*
11.5.8 Tracer Exchange Measurements *382*
11.6 Single-Molecule Observation *383*
11.6.1 Basic Principles of Fluorescence Microscopy *384*
11.6.2 Time Averaging Versus Ensemble Averaging *385*
11.6.3 Correlating Structure and Mass Transfer in Nanoporous Materials *388*
References *389*

12 Imaging of Transient Concentration Profiles *395*
12.1 Different Options of Observation *396*
12.1.1 Positron Emission Tomography (PET) *397*
12.1.2 X-Ray Monitoring *397*
12.1.3 Optical Microscopy *398*
12.1.4 IR Microscopy *399*
12.1.5 Magnetic Resonance Imaging (MRI) *400*
12.2 Monitoring Intracrystalline Concentration Profiles by IR and Interference Microscopy *403*
12.2.1 Principles of Measurement *403*
12.2.2 Data Analysis *406*
12.3 New Options for Experimental Studies *408*
12.3.1 Monitoring Intracrystalline Concentration Profiles *408*
12.3.1.1 New Options of Correlating Transport Diffusion and Self-diffusion *412*
12.3.1.2 Visualizing Guest Profiles in Transient Sorption Experiments *412*
12.3.1.3 Testing the Relevance of Surface Resistances by Correlating Fractional Uptake with Boundary Concentration *413*
12.3.1.4 Applying Boltzmann's Integration Method for Analyzing Intracrystalline Concentration Profiles *414*
12.3.2 Direct Measurement of Surface Barriers *415*
12.3.2.1 Concentration Dependence of Surface Permeability *415*
12.3.2.2 Correlating the Surface Permeabilities through Different Crystal Faces *417*
12.3.3 Adapting the Concept of Sticking Probabilities to Nanoporous Particles *421*
References *423*

13 Direct Macroscopic Measurement of Sorption and Tracer Exchange Rates *427*
13.1 Gravimetric Methods *427*
13.1.1 Experimental System *428*

13.1.2 Analysis of the Response Curves *429*
13.1.2.1 Intrusion of Heat Effects *429*
13.1.2.2 Criterion for Negligible Thermal Effects *430*
13.1.2.3 Intrusion of Bed Diffusional Resistance *431*
13.1.2.4 Experimental Checks *432*
13.1.3 The TEOM and the Quartz Crystal Balance *432*
13.2 Piezometric Method *433*
13.2.1 Mathematical Model *434*
13.2.2 Single-Step Frequency Response *436*
13.2.3 Single-Step Temperature Response *436*
13.3 Macro FTIR Sorption Rate Measurements *437*
13.4 Rapid Recirculation Systems *440*
13.4.1 Liquid Phase Systems *441*
13.5 Differential Adsorption Bed *441*
13.6 Analysis of Transient Uptake Rate Data *443*
13.6.1 Time Domain Matching *443*
13.6.2 Method of Moments *444*
13.7 Tracer Exchange Measurements *445*
13.7.1 Detectors for Radioisotopes *446*
13.7.2 Experimental Procedure *447*
13.8 Frequency Response Measurements *447*
13.8.1 Theoretical Model *448*
13.8.2 Temperature Frequency Response *451*
13.8.3 Measurement Limits *451*
13.8.4 Experimental Systems *452*
13.8.5 Results *454*
13.8.6 Frequency Response Measurements in a Flow System *455*
References *456*

14 Chromatographic and Permeation Methods of Measuring Intraparticle Diffusion *459*
14.1 Chromatographic Method *460*
14.1.1 Mathematical Model for a Chromatographic Column *460*
14.1.1.1 Time Domain Solutions *462*
14.1.1.2 Form of Response Curves *463*
14.1.2 Moments Analysis *464*
14.1.2.1 First and Second Moments *464*
14.1.2.2 Use of Higher Moments *466*
14.1.2.3 HETP and the van Deemter Equation *466*
14.2 Deviations from the Simple Theory *468*
14.2.1 "Long-Column" Approximation *468*
14.2.1.1 Pressure Drop *468*
14.2.1.2 Nonlinear Equilibrium *469*
14.2.1.3 Heat Transfer Resistance *470*
14.3 Experimental Systems for Chromatographic Measurements *470*

14.3.1 Dead Volume *471*
14.3.2 Experimental Conditions *471*
14.4 Analysis of Experimental Data *472*
14.4.1 Liquid Systems *473*
14.4.2 Vapor Phase Systems *473*
14.4.3 Intrusion of Axial Dispersion *477*
14.5 Variants of the Chromatographic Method *479*
14.5.1 Step Response *479*
14.5.2 Limited Penetration Regime *480*
14.5.3 Wall-Coated Column *480*
14.5.4 Direct Measurement of the Concentration Profile in the Column *480*
14.6 Chromatography with Two Adsorbable Components *481*
14.7 Zero-Length Column (ZLC) Method *483*
14.7.1 General Principle of the Technique *483*
14.7.2 Theory *485*
14.7.2.1 Basic Theory for Intraparticle Diffusion Control *485*
14.7.2.2 Short-Time Behavior *486*
14.7.2.3 Diffusion in Macroporous Particles *488*
14.7.3 Deviations from the Simple Theory *489*
14.7.3.1 Surface Resistance and/or Fluid Film Resistance *489*
14.7.3.2 Measurement of Surface Resistance by ZLC *489*
14.7.3.3 Fluid Phase Hold-Up *490*
14.7.3.4 Effect of Isotherm Nonlinearity *491*
14.7.3.5 Heat Effects *492*
14.7.4 Practical Considerations *493*
14.7.4.1 Choice of Operating Conditions and Extraction of the Time Constant *493*
14.7.4.2 Preliminary Checks *494*
14.7.4.3 Equilibration Time *494*
14.7.4.4 Partial Loading Experiment *495*
14.7.5 Extensions of the ZLC Technique *497*
14.7.5.1 Tracer ZLC *497*
14.7.5.2 Counter-current ZLC (CCZLC) *498*
14.7.5.3 Liquid Phase Measurements *498*
14.8 TAP System *500*
14.9 Membrane Permeation Measurements *501*
14.9.1 Steady-State Permeability Measurements *501*
14.9.2 Wicke–Kallenbach Steady-State Method *503*
14.9.2.1 Macro/Mesopore Diffusion Measurements *503*
14.9.2.2 Intracrystalline Diffusion *503*
14.9.3 Time Lag Measurements *504*
14.9.3.1 Linear Systems (Constant *D*) *504*
14.9.3.2 Single-Crystal Zeolite Membrane *505*
14.9.3.3 Nonlinear Systems *506*
14.9.3.4 Evaluation of Single-Crystal Membrane Technique *507*

14.9.4 Transient Wicke–Kallenbach Experiment *508*
14.9.5 Comparison of Transient and Steady-State Measurements *510*

Content of Volume 2

Part V Diffusion in Selected Systems *515*

15 Amorphous Materials and Extracrystalline (Meso/Macro) Pores *517*
15.1 Diffusion in Amorphous Microporous Materials *518*
15.1.1 Diffusion in Microporous Glass *518*
15.1.2 Diffusion in Microporous Carbon *520*
15.2 Effective Diffusivity *524*
15.2.1 Direct Measurement of Tortuosity in a Porous Catalyst Particle *525*
15.2.2 Determination of Macropore Diffusivity in a Catalyst Particle under Reaction Conditions *526*
15.3 Diffusion in Ordered Mesopores *527*
15.4 Diffusion through Mesoporous Membranes *530*
15.4.1 Mesoporous Vycor Glass *530*
15.4.2 Mesoporous Silica *531*
15.4.2.1 Permeance Measurements *532*
15.4.2.2 Modified Mesoporous Membranes *533*
15.5 Surface Diffusion *534*
15.5.1 Determination of Surface Diffusivities *534*
15.5.2 Concentration Dependence *535*
15.6 Diffusion in Liquid-Filled Pores *538*
15.7 Diffusion in Hierarchical Pore Systems *539*
15.7.1 Ordered Mesoporous Material SBA-15 *539*
15.7.2 Activated Carbon with Interpenetrating Micro- and Mesopores *541*
15.7.3 Diffusion in "Mesoporous" Zeolites *544*
15.8 Diffusion in Beds of Particles and Composite Particles *545*
15.8.1 Approaches by Mathematical Modeling *546*
15.8.2 Temperature Dependence *548*
15.8.3 Multicomponent Systems *550*
15.9 More Complex Behavior: Presence of a Condensed Phase *552*
15.9.1 Diffusion in Porous Vycor Glass: Hysteresis Effects *553*
15.9.2 Supercritical Transition in an Adsorbed Phase *555*
15.9.3 Diffusion in a Composite Particle of MCM-41 *556*
References *557*

16 Eight-Ring Zeolites *561*
16.1 Eight-Ring Zeolite Structures *561*
16.1.1 LTA Structure *562*
16.1.2 Cation Hydration *563*
16.1.3 Structure of CHA *564*

16.1.3.1 Structure of DDR (ZSM-58) *565*
16.1.4 Concentration and Temperature Dependence of Diffusivity *566*
16.2 Diffusion in Cation-Free Eight-Ring Structures *567*
16.2.1 Effect of Window Dimensions *567*
16.2.2 Diffusion of CO_2 and CH_4 in DDR *569*
16.3 Diffusion in 4A Zeolite *571*
16.4 Diffusion in 5A Zeolite *573*
16.4.1 Uptake Rate Measurements *576*
16.4.2 Measurements with Different Crystal Sizes *579*
16.4.3 PFG NMR Measurements over Different Length Scales *580*
16.4.4 Intra-Cage Jumps *581*
16.4.5 Comparison of Different Zeolite Samples and Different Measurement Techniques *581*
16.5 General Patterns of Behavior in Type A Zeolites *582*
16.5.1 Activation Energies *584*
16.5.2 Pre-exponential Factor *585*
